Feline Wellness Plan

The goals of our feline wellness plan are to ensure good health and a high quality of life from kittenhood to the golden years. To do so, our veterinarians recommend regular physical examinations, routine diagnostic testing, parasite prevention, and dental cleanings. Below is a sample schedule of what you can expect throughout the life of your cat. **A = all cats O = cats that have outdoor exposure L = as needed by lifestyle/health**

	Weeks		**Mo.**	**Years**																		
Age of cat:	8	12	4-6	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19
Comparative human age:	←Childhood→			18	25	30	35	40	44	48	52	56	60	63	66	70	73	77	80	84	87	90
Examinations done by a trained veterinarian may allow for early detection of diseases and illnesses not always evident to an owner. Our veterinarians advise yearly wellness exams through age 6, then twice a year starting at age 7. Certain health conditions may necessitate more frequent examinations.																						
Vaccinations are recommended based on your cat's age and lifestyle.

Diagnostic tests allow for an assessment of your pet's internal organs and their function. Often, the first signs of a disease can be detected by laboratory testing, before any symptoms occur. Catching these diseases early results in easier, more effective treatment. In addition, regular testing allows for detection of subtle changes that may not be obvious without comparison to previous results.																						
FeLV/FIV Screen	A			L		L		L		L		L		L		L		L		L		L
